

Region Performance Report

Data Analytics Track | Task 18

Prepared by: Akshat Srivastava | Internship Day 18 of 45 | VEDA Technology

Objective

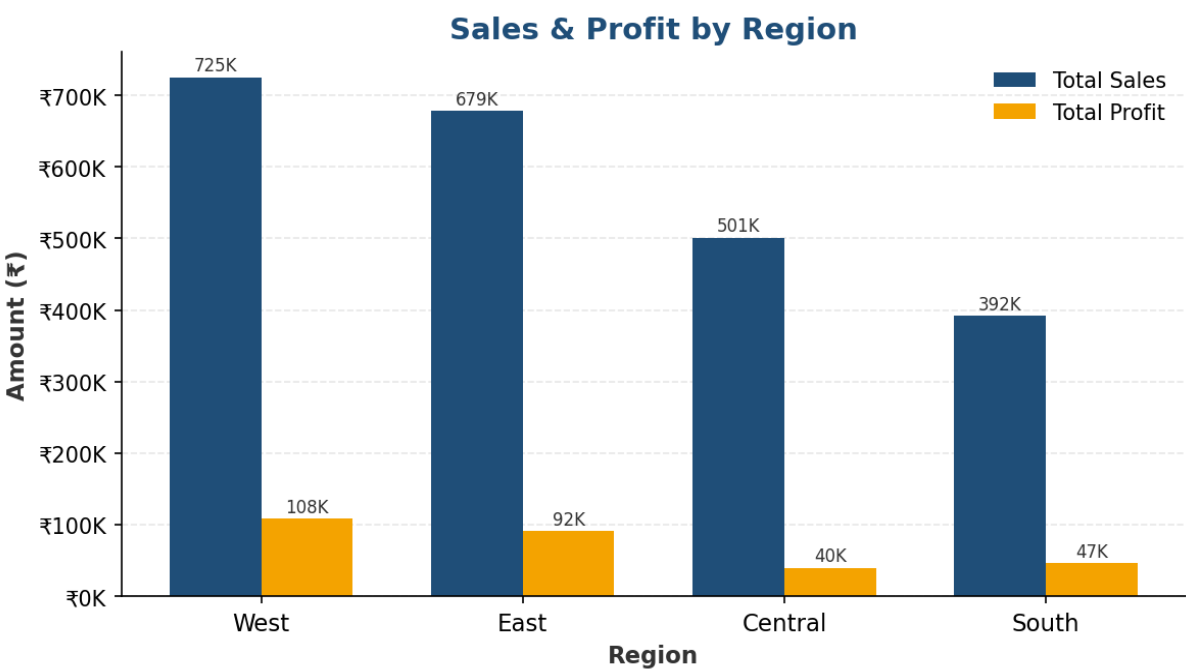

Compare sales and profit performance across the four regions of the Superstore dataset (West, East, Central, South) to identify top and bottom performing regions, and practice grouping and comparison techniques in data analysis.

Region Summary

Rank	Region	Total Sales (₹)	Total Profit (₹)
1	West	7,25,458	1,08,418
2	East	6,78,781	91,523
3	Central	5,01,240	39,706
4	South	3,91,722	46,749

Grand Total: ₹22,97,201 Sales | ₹2,86,397 Profit

Sales & Profit Comparison

Key Insights

- West is the top-performing region, leading in both total sales (₹7,25,458) and total profit (₹1,08,418).
- East follows closely as the second-best performer, with ₹6,78,781 in sales and ₹91,523 in profit.
- Central ranks third in sales (₹5,01,240) but has the lowest profit (₹39,706) among all regions.
- South has the lowest sales (₹3,91,722), yet earns more profit than Central (₹46,749 vs ₹39,706) — indicating better cost efficiency despite lower sales volume.

Conclusion

West and East together drive the majority of the company's revenue and profit, making them the priority regions for continued investment. South, despite its smaller sales base, converts revenue into profit more efficiently than Central and may benefit from a closer look at Central's cost structure or discounting strategy.
